Code1-`import pandas as pd`

```
# Read the dataset into a DataFrame
df = pd.read_csv('world_cup_matches.csv')
```

```
# Get the total number of matches played
total_matches = len(df)
```

```
print("Total number of World Cup matches played:", total_matches)
```

Output-Country with the least World Cup wins: Pak

Code2-`import pandas as pd`

```
# Read the dataset into a DataFrame
```

```
df = pd.read_csv('datasetpr3.csv')
```

```
# Group the data by venue and count the number of matches played in each venue
```

```
venue_matches = df['Venue'].value_counts()
```

```
# Find the venue with the most World Cup matches
```

```
venue_most_matches = venue_matches.idxmax()
```

```
print("Venue with the most World Cup matches:", venue_most_matches)
```

Output-Venue with the most World Cup matches: Lord's

Code3-import pandas as pd

```
# Read the dataset into a DataFrame
```

```
df = pd.read_csv('datasetpr3.csv')
```

```
# Filter the DataFrame for matches played in 1983
```

```
finalists_1983 = df[df['Winner'] == 1983][['Team-1', 'Team-2']].values[0]
```

```
# Get the two finalists from the filtered DataFrame
```

```
finalists_1983 = matches_1983['Winner'].unique()
```

```
print("Finalists played in 1983:", finalists_1983)
```

Output-Finalist played in 1983:India

Code4-import pandas as pd

```
# Read the dataset into a DataFrame
```

```
df = pd.read_csv('datasetpr3.csv')
```

```
# Get the total number of matches played
```

```
total_matches = len(df)
```

```
print("Total number of World Cup matches played:", total_matches)
```

Output-Total number of World Cup matches played: 12
